

THE FAKE “PHYSICS REVIEW BOARD” COSTS LIVES!

A ranting troll who calls himself the “Physics Review Board” has viciously attacked and libeled me, AESOP Institute, affiliated firms, and a number of other companies who have been associated with me or AESOP.

A coward, he hides his identity, as he knows his statements are sufficient to prosecute him for libel.

A few of his statements regarding unpaid debts are true. These were investments in earlier AESOP affiliates which no longer exist.

Although there is no legal requirement to do so, all prior investors will have the opportunity to convert such investments into new equity. That fact appears publicly on this website at the end of the AESOP Energy Executive Summary.

His distorted comments concerning technology are legion. The rants reflect ignorance of the entrepreneurial process - as well as dogmatic beliefs regarding science - where experiments now prove textbooks obsolete.

Human survival is now at issue due to the climate emergency. Millions if not billions of lives are at hazard from fires, floods, extreme heat, etc.

Existing energy technologies such as intermittent wind and solar photovoltaics can soon be superseded by surprising new science and technology that AESOP calls Green Swans.

New science typically takes 20 to 30 years to yield practical products. That time is often extended when the science is difficult for scientists and engineers to believe possible.

For example, engines that need no fuel. Ken Rauén's piston engines extend the Second Law of Thermodynamics, which has become Holy Writ, in spite of numerous experiments that demonstrate it needs to be modified. Prof. Daniel Sheehan, University of San Diego, has collected a number of examples of such experiments and performed his own.

Rauen has presented evidence of his ground-breaking science at 3 AAAS Meetings on the Second Law without a single refutation. The Proceedings of one such Meeting are available upon request.

The Troll has attacked this work, along with several other viable technologies, in arrogant rants for many years.

His closed mind has severely delayed commercialization of this world changing technology which will make possible inexpensive, self-powered: Emergency generators, Heat Pumps and 24/7/365 alternatives to intermittent wind and solar photovoltaic systems.

Delays he has caused are now likely costing lives of large numbers of men, women and children, worldwide!
