

## NEW PRODUCT ANNOUNCEMENT

For Release 1/4/2019

Following the success of our Glowstick Heater, Quantum Heat is pleased to announce an innovative new product, the CoolTec™ Air Conditioner.

This break-through device cools the surrounding air continuously, using only the power needed to run the small circulation fans

### How it works:

Using an orthogonal quantum vortex, thermal input is transferred by conduction to anti-electron neutrinos, which then disperse the absorbed heat into cross-dimensional space. The quantum vortex is made of stabilized chrono-polaritons, created by our proprietary Axilon beam line (patent pending). A Hilsch mode thermal diode prevents the heat from returning through the dimensional gate.

A *QuantumHeat* product, proudly made on Planet Earth
