Subject: My Analysis of the Latest Brillouin Results

David,

I believe that the attached graph is an accurate representation of Brillouin's most recent results. Obviously, this shows progress over the past 4 months, and is further representative of the progress seen over the past year. The active tube represented by the data below was transferred to its third reactor late last year and has shown an increasingly greater COP with each transfer, without any setbacks. I feel these results signal that Brillouin is progressing towards a commercializable technology.

Best,
Fran
